

Support. Upgrade. Maintenance.

AFT customers who have a Support, Upgrade, Maintenance (SUM) agreement will automatically upgrade to the most recent version at no extra cost. Combined with training seminar discounts and access to premier support, the decision is easy to keep your SUM agreement activated.

<p>Multi-Scenario Comparison: Data can be compared between multiple scenarios to show changes made</p>	<p>Import from CAESAR II® neutral files and Piping Component Files (.pcf) as well as import/export model data from an EPANet file</p>	<p>New graphing features include display of multiple graphs in same tab, stacked graphs, double-Y axis graphs, and new graph folders to organize and easily display groups of saved graphs</p>
<p>Compression ratio can be used to define the compressor performance</p>	<p>Enhanced Excel® integration such as: Export data with a controlled scenario-to-worksheet Manager; improved import model change data with batch import to change multiple scenarios at once using junction and parameter friendly names; easier Cost Database creation using Excel import/export</p>	<p>Language choices for German and Chinese, in addition to French and Spanish, for all output, graphs and menus</p>
<p>Multi-level undo and redo on the Workspace</p>	<p>Isometric grid drawing on the Workspace</p>	<p>GIS shape files can be imported to create a model</p>
<p>All Summary Output parameters can now be displayed on the Visual Report</p>	<p>Made centrifugal compressor, reciprocating compressor and fan data entry clearer on the Compressor/Fan Property window</p>	<p>Improved search capability includes searches for pipe and junction notes, names and numbers</p>
<p>Improved intelligence on when a model needs to be saved to preserve the output</p>	<p>Improved Relief Valve specification with opening and closing profiles</p>	<p>Intermediate Axial Points calculations are shown for all pipes in a collapsible table</p>
<p>New and updated themes</p>	<p>Large models now load faster</p>	<p>Volumetric flow rate set points can be used for Control Valves</p>
<p>Improved model loading speed</p>	<p>Enhanced pipe heat transfer including external convection coefficient calculation, buried pipe heat transfer, and heat tracing</p>	<p>Ability to create child scenarios without results saving duplication and load time</p>

Ready to access these new features? Email info@aft.com

Full list of New Features you can use in AFT Arrow™ 8

Significant

- Data can be compared between multiple scenarios to show changes made
- Compression ratio can be used to define the compressor performance
- Multi-level undo and redo on the Workspace
- All Summary Output parameters can now be displayed on the Visual Report

Overall

- Improved intelligence on when a model needs to be saved to preserve the output
- Improved model loading speed
- Improved language refresh speed
- New and updated themes

Workspace

- Magnifier tool to quickly view objects on the Workspace
- Allow pipe/junction editing while the Undefined Items panel is shown
- Double-click on a junction on the Toolbox to add multiple to the Workspace (similar to pipes)
- Ability to draw pipes off the grid when in isometric mode
- Junction icons automatically rotate to align with pipes
- Select shortest path between two junctions

Visual Report

- Visual Report Control has been redesigned

Pipes

- Pipes can be joined together to form a single pipe
- Heat tracing now allows the entry of power/length and number of turns

Junctions

- More intelligent Tee/Wye junction during input and Workspace movements
- Built-in K values for bends with r/D between 0.5 and 1

Output

- Notes can be added to cells in the Output tables
- Output Control parameters can be filtered by typing part of the parameter name
- Thermal conductivity used in the heat transfer calculations is now displayed

Global Edit

- Revised to improve usability
- A pipe or junction can be selected as the base data to apply to other pipes or junctions
- Notes can be globally edited on junctions

Other

- Ability to import custom Fittings & Losses from a comma-separated file
- Design Alerts and can saved to and loaded from a comma-separated file
- New Diagnostics window to help identify special features or options being used in the scenario

Something For Everyone

Hands-on Seminars

Held several times a year, this classroom style setting accelerates your skills and teaches you how to be an AFT expert. (check the class schedule at www.aft.com)

Custom Training

AFT can bring our training to your location! You can also utilize our Flow Expert Package to customize a training or model solutions for your projects.

Free Webinars

Hosted twice a month, webinars introduce our products and talk about solutions-based uses. Recorded webinars are located on our website.

Contract Consulting

Have more projects than you can handle, or maybe you just need some expert analysis? Extend your team with an experienced fluid systems engineer.

Tips & Tricks

Do you read the AFT Pipeline newsletter? Each month, an AFT engineer gives readers a new tip and trick to keep you up to date.
